

## MIS-VM Workflow for the Epson 9000

Attached are new MIS VM curves for the 9000. Since they use the Epson driver color management setting of "No Color Adjustment," they should be cross-platform and work on both the PC and Mac.

The important settings are: Adobe RGB (1998) & gray gamma 2.2 in the Photoshop Edit-Color Settings box, and color ink, Photo Quality Ink Jet paper, 1440 Super Fine, and "No Color Adjustment" in the Epson driver.

The curves are profiled for Epson Archival Matte paper.

The usual workflow is used -- edit in grayscale, then convert to RGB and apply the desired curve only for printing through the Epson driver.
