What is DYNAMIC COMPONENT SYNTHESIS?

For many musicians the process of shaping distinctive sounds involves combining elements from many sources; multiple synthesizers, samplers, and acoustic instruments all processed by digital effects. ENSONIQ has now incorporated this technique into this amazing keyboard. The ENSONIQ SD-1.

The ENSONIQ SD-1 uses two new VLSI chip designs to offer complete flexibility in sound generation. By defining each component of a sound and allowing them to interact dynamically with the full complement of processing tools, from waves to digital effects, you have the power of six independent synthesizers in one.

Simply defined, DYNAMIC COMPONENT SYNTHESIS is a unique sound generation process that combines carefully selected waves with dynamically controlled digital signal processing.

What is a VOICE?

An SD-1 voice is the building block from which sound programs are created. Each voice has 15 modulation sources, pitch range, programmable wave delay, 2 independent multi-mode dynamic digital filters, 3 eleven stage envelope generators with velocity, and keyboard tracking, 1 low frequency oscillator with delay and modular rate (seven possible wave shapes), pitch table, modular panning, and output routing to one of the three stereo busses (DRY, FX1, FX2, (an additional dry stereo buss is available on the SD-1)).

What is a SOUND PROGRAM?

An SD-1 sound program is a dynamic structure made up of six voices and an effects setting. The two exclusive Patch Select buttons determine which of the six voices will play at any given time.

What is a DRUM PROGRAM?

An SD-1 drum program can use up to 63 waves per program, with separate pitch, volume, panning, and destination voice programmed for each wave.

What is a PERFORMANCE PRESET?

An SD-1 performance preset is a combination of three sound programs and an effects set-up which can be instantly recalled for use in performance. Presets are handy "performance memories" which can allow you to create and save sound program combinations, splits, layers, and patch select combinations. The SD-1 contains 60 pre-programmed performance presets. After playing through each of the 180 sound programs we suggest you take some time to explore each of the sixty performance presets.

Selecting a Sound Program

To select an SD-1 sound program:

- Press **SOUNDS**.
- Press one of the 10 Bank buttons below the display (numbered 0-9) to select a bank of six sound programs. The display shows you the names of the six sound programs in each bank.
- Press the button above or below any of the six sound program names to select that program as the current sound. Try selecting and playing a few different sounds. Notice that when you select a sound program, its name is underlined. The currently selected program is always underlined.

Choosing Internal, ROM 0, ROM 1 and Cartridge Sounds

The **BankSet** button is used to choose between internal, ROM, and cartridge sounds. The status of the **BankSet** LED (whether it is off, on, or flashing), along with the display, tells you where you are at any given time. Press **Sounds**. Then:

- To select internal sounds, the **BankSet** LED should be off (unlit). If it is on or flashing press **BankSet** until it is off. The display indicates INT followed by the bank # in the upper left corner.
- To select ROM 0 sounds, press the **BankSet** button again. The **BankSet** LED *flashes*, and the display indicates RM0 followed by the bank # in the upper left corner.
- To select ROM 1 sounds, press the **BankSet** button again. The **BankSet** LED remains *flashing*, and the display indicates RM1 followed by the bank # in the upper left corner.
- To select cartridge sounds, press the **BankSet** button. The **BankSet** LED lights, and the display indicates CRT followed by the bank # in the upper left corner. (Note that a VPC-100 Series cartridge or STOR-CART 32 (STC-32) must be inserted in before cartridge sounds can be selected and played.)

Layering (stacking) a sound with the selected sound

To layer (or stack) any program with the currently selected sound program, *double-click* the soft button corresponding to the sound name on the display. The underline beneath the name of the layered sound will *flash* and you will hear both sounds playing together.

Up to three sound programs (one selected and two layered with it) can be active at once. To de-select a layered sound press its soft button again and the flashing underline will disappear. If you already have two-programs layered with the primary sound program, and you double-click on a fourth sound, that sound will replace the most recently selected sound program in the stack (layer).

You can layer any combination of Internal, ROM 0, ROM 1, or Cartridge sounds programs. Also, the sounds which are layered do not have to be in the same bank.

For more detailed information on operating and using the SD-1 we suggest you consult the SD-1 Musicians Manual.

VSD-200 Disk Contents

Congratulations on the purchase of the SD-1 Music Production Synthesizer. As you are about to see and hear, the SD-1 will unleash your creative potential in an integrated, user-friendly workstation environment.

The VSD-200 disk which comes with your SD-1 contains a wealth of information, including over 500 sound programs, organized in such a way as to help you become familiar with the various file types and disk operations offered by the SD-1.

You should make a backup copy of the VSD-200 disk as soon as possible. Then store the original in a safe place and use the copy for your everyday work. See the *SD-1 Musician's Manual* for a description of the Copy Disk function.

The VSD-200 disk contains the following disk files:

<u>File Type</u>	<u>File Name</u>	<u>Description</u>
1-PROGRAM	WOW-SOUND	a big, dramatic sound that continues to unfold for as long as you hold down a note
	<12 DRUM KITS> ...	12 additional drum kits saved as individual programs (see the <i>SD-1 Musician's Manual</i> for information on saving the sound from the Write page after loading a 1-Program file)
6-PROGRAM	<10 BANKS>	these ten 6-Program files contain the 60 original VFX ^{SD} Internal RAM sounds reorganized into categories so that you can, for example, easily load just the bass sounds, or keyboard sounds, etc.
	TINE-PIANOS	6 additional electric piano sounds using the new EPNO and PIANO-16 waves.
30-PROGRAM	ADD-VFX-ROM	the 30 programs from the ROM memory of the VFX which are not contained in the VFX ^{SD} Internal or ROM program memory
60-PROGRAM	SD1-INT	a backup of the SD-1 Internal RAM sounds
	SD1-ROM-0	a backup of the SD-1 ROM-0 sounds
	SD1-ROM-1	a backup of the SD-1 ROM-1 sounds
	VFXSD-INT	the 60 VFX ^{SD} II Internal RAM sounds
	VFXSD-ROM	the 60 VFX ^{SD} II ROM sounds

File Type**File Name****Description**

60-PROGRAM	KEYS 1- 60	60 keyboard-type sounds to aid you in finding the right sound for any type of music
	VSD-1000-C	60 Drum kits taken from the optional VSD-1000 sound disk. The VSD-1000 contains over one thousand sounds, and is available from your authorized ENSONIQ dealer.
	ADD-VPC-100	contains 42 additional programs from the Internal RAM memory of the VFX (note that banks 7-9 contain "blank" program locations)
